[linkedin.com/in/hollynava](https://www.linkedin.com/in/hollynava) · hollynava.vercel.app (pwd: 5280Vision)

I create clarity in complex spaces. As a strategic product and experience designer, I help teams navigate ambiguity and design digital systems that actually work—for users, for business, and for the future. My work spans vision, design, execution, and systems thinking. I translate bold ideas into elegant, grounded solutions, and specialize in the places where physical and digital tools intersect. I use AI as a force multiplier, not a substitute for product judgment.

EXPERIENCE

ICON – 3D-printed robotic homebuilding

Principal Product Experience Designer | 2022–2025

Director, Digital Product Experience | 2025–2026

- Led **design and development for the operator experience for ICON's building-scale construction robots**, turning expert-only, engineer-on-site operation into a guided, task-based system, cutting the operating crew from ~5 to ~1.5 and onboarding from months to weeks.
- **Drove product direction and vision through primary research** — field-testing in live jobsite conditions and running in-depth go-to-market interviews across customers, builders, and internal stakeholders, and turning what I learned into the holistic product ecosystem and roadmap..
- Built a **scalable design language to support both desktop and field-friendly interfaces** across three hardware generations and two form factors, including a large-format, high-contrast field variant and extended beyond the screen with status lighting, sound, and haptics to keep an increasingly autonomous machine legible and safe.
- Partnered with engineers to translate the construction process from design to print into a guided, on-screen task system, and **designed the features that advanced autonomy while keeping operators in control** (Routines, Auto-play, just-in-time prompts, task-based construction) — shipping ~60% of the build sequence as guided tasks and dropping print time ~30%.
- **Architected BuildOS from a pile of fragmented internal tools into a unified product ecosystem** built on a shared data spine, authoring the ecosystem strategy, phased roadmap, and PRDs across product, engineering, and hardware — now ICON's official product direction: in internal use today and in active build for upcoming external customers.

DUST Identity – patented physical-security technology

Sr. UX Researcher & Designer | 2021–2022

- Drove **product-market-fit design discovery** for a first-of-its-kind, newly patented physical-security technology, running in-depth field investigations of complex enterprise workflows to define where the technology created real value.
- Designed a simplified mobile application and validated the physical hardware and security-labeling approach through usability testing, **sharpening both the digital and physical sides of the product.**

Robots & Pencils – digital product consultancy

Sr. UX Researcher & Designer | 2019–2021

- Led UX strategy and design for an enterprise negotiation tool for one of the world's largest retailers that **drove \$10M in supplier savings in its first trial negotiation**, from a supplier the buyer had previously failed to move.
- Delivered **numerous product research and design activities across a wide span of industries from retail, education, gaming, and transportation.** Frequently operated in ambiguity, quickly identifying user needs, defining key workflows, and shipping intuitive, effective solutions.
- Regularly recognized for delivering concise insights and clear, actionable design direction that empowered clients to execute faster with higher confidence.
- Acted as the glue between stakeholders, devs, and users—translating complex processes into simple, elegant UX that scaled with evolving requirements.

Earlier: **Sr. UX Designer / Product Owner**, Toastmasters International (2018–2019) — new custom LMS; accessibility-driven onboarding redesign. **Senior Digital Marketing Mgr**, Atkins (2013–2017) — regional digital marketing, employee social-engagement program, and a CEO thought-leadership/content program.

KEY SKILLS

Discovery + Research: Product Discovery · User & Market Research · Usability Testing · Journey Mapping · Qualitative + Quantitative Analysis

Design + Delivery: End-to-End Product Design · Design Systems · Prototyping · Story Mapping · Developer Partnership

Product Leadership: Product Strategy & Vision · Roadmapping & Prioritization · Systems / Ecosystem Design · Outcome & OKR Definition · Cross-Functional & Executive Alignment

Product Management: Physical/Digital & Hardware-Software Products · AI-Enabled Product · Design-Rooted Strategy

EDUCATION

BFA, Colorado State University — Design + Computer Science

Certifications: Certified Product Owner, Certified Scrum Master, UX Design

Currently in Castle Rock, CO · Open to relocation
