I create clarity in complex spaces. As a design-rooted product leader who turns fragmented, ambiguous problems into coherent product strategy and intuitive experiences, I operate from ecosystem vision down to the shipped interface. I specialize where the physical and digital intersect, building systems that work for users, the business, and the future. I lead through clarity and influence, and use AI as a multiplier on deep product judgment and quality execution, not a substitute for it.

EXPERIENCE

ICON – 3D-printed robotic homebuilding | 2022–2026

Director, Digital Product Experience (promoted from Principal Product Experience Designer)

Led the operator and product experience for ICON's building-scale 3D-printing construction robots, plus BuildOS, the software ecosystem spanning architectural design, project planning, and robotic print execution.

- Led the redesign of the **operator experience for ICON's building-scale construction robots**, turning expert-only, engineer-on-site operation into a guided, task-based system. Cut the operating crew from ~5 to ~1.5 and onboarding from months to weeks (a recent project reached independence in 3 weeks).
- Grounded the design in **field research, shadowing operators in real jobsite conditions** (sun, glare, gloves, noise), and rebuilt the interface for it: a large-format, high-contrast variant of the design system with glove-sized targets and simplified navigation, extended beyond the screen with status lighting, sound, and haptics (with industrial design) to keep an increasingly autonomous machine legible and safe.
- Partnered with software engineers to translate a building's design into a task-graph for **automated translation into a guided, on-screen task system** (an AI-to-human translation layer), and designed the features that advanced autonomy while keeping operators in control: Routines (one-tap packaged operations), Auto-play (operator-controlled autonomous printing), and just-in-time prompts that eliminated missed-step stalls (each capable of halting a build 30+ minutes). About 60% of the build sequence shipped as guided tasks, and print time dropped ~30%.
- **Designed across three hardware generations** (Vulcan Block 3/4 and the next-gen Titan) and two form factors (single-story gantry, multi-story arm), holding one design language so each new machine felt like the same product. Gave construction and project managers their first real-time field visibility with live task status and productivity metrics.
- **Architected BuildOS from a fragmented set of internal tools** into a unified product ecosystem (three core products plus two supporting platforms) on a common data spine and shared components. Authored the ecosystem strategy, phased roadmap, and

module PRDs, aligning product, engineering, hardware, and architecture. Adopted as ICON's official product direction and now in active build.

- Bridged mechanical, embedded/firmware, and application engineering, translating machine-level realities into user-facing features (for example, turning raw fault signals into a clear alerting and monitoring system).

DUST Identity – patented physical-security technology | 2021–2022

Sr. UX Researcher & Designer

- Drove **product-market-fit discovery** for a first-of-its-kind, newly patented physical-security technology, running in-depth field investigations of complex enterprise workflows to define where the technology created real value.
- Designed a simplified mobile application and validated the physical hardware and security-labeling approach through usability testing, **sharpening both the digital and physical sides of the product**.

Robots & Pencils – digital product consultancy | 2019–2021

Sr. UX Researcher & Designer

- Led UX strategy and design for an enterprise negotiation tool for one of the world's largest retailers that **drove \$10M in supplier savings in its first trial negotiation**, from a supplier the buyer had previously failed to move.
- Transitioned a bloated 30+ tab data platform into a scannable decision tool; ran usability testing, Kano studies, and story-mapping to define scope and align development and strategy teams.
- Delivered product research and design across retail, education, gaming, and transportation, turning ambiguity into shipped solutions and clear direction clients could act on.

Earlier: **Sr. UX Designer / Product Owner**, Toastmasters International (2018–2019) — new custom LMS; accessibility-driven onboarding redesign. **Senior Digital Marketing Mgr**, Atkins (2013–2017) — regional digital marketing, employee social-engagement program, and a CEO thought-leadership/content program.

KEY SKILLS

Product Leadership: Product Strategy & Vision · Roadmapping & Prioritization · Systems / Ecosystem Design · Outcome & OKR Definition · Cross-Functional & Executive Alignment

Discovery + Research: Product Discovery · User & Market Research · Usability Testing · Journey Mapping · Qualitative + Quantitative Analysis

Design + Delivery: End-to-End Product Design · Design Systems · Prototyping · Story Mapping · Developer Partnership

Product Management: Physical/Digital & Hardware-Software Products · AI-Enabled Product · Design-Rooted Strategy

EDUCATION

BFA, Colorado State University — Design + Computer Science

Certifications: Certified Product Owner, Certified Scrum Master, UX Design

Currently in Castle Rock, CO · Open to relocation
